EXPERIENCE

Arcimoto
Senior Software Engineer

May 2019 - SEPTEMBER 2023

As the Cloud Systems Architect at Arcimoto, I was in charge of our AWS cloud infrastructure and DevOps, including all vehicle telemetry. I assisted departments with the creation of tools needed to streamline their processes - working with internal departments to get specifications, implementing those specifications into a functional piece of software, and then maintaining and expanding software features as needed. Using a combination of APIs and other microservices allowed us to build a stable and robust infrastructure with a much lower cost. I built and maintained the Serverless SPA that managed all of our data for Arcimoto vehicles. Built Continuous Integration (CI/CD) and automated testing processes to build and deploy.

Inseego
Software Engineer 2

JANUARY 2019 - MAY 2019

At Inseego, I was a member of the maintenance team, assigned to work bugs and make hotfixes to the production code when warranted. We used a 2-week sprint process with daily standups. Our team was also selected to implement the major accessibility updates needed to maintain government compliance for our contracts due to our familiarity with all aspects of the company client portals.

Imagination International, Inc.
Software Development Team Lead

FEBRUARY 2019 - NOVEMBER 2019

At Imagination International, Inc., I led the Software Development team using a 2-week sprint-based process. As team lead, I was in charge of development for new applications for the warehouse. Our team included QA, UI and a junior developer; I managed tasks for them and encouraged their continuing education and career growth. I mentored the junior developer through pair coding and other activities.

CERTIFICATIONS

AWS Cloud Practitioner

SKILLS

Android
